Management Discussion of Fund Performance

Investment Objective and Strategies

The NBI U.S. High Conviction Equity Private Portfolio's investment objective is to provide long-term capital growth. The Fund invests directly, or through investments in securities of other mutual funds, in a portfolio consisting primarily of common shares of U.S. companies selected using a high conviction investment approach.

The portfolio manager seeks undervalued shares in every sector, and also considers the quality and liquidity of the securities. The portfolio manager relies on its convictions to select securities. In applying this high conviction investment approach, the industry and geographic allocation and the weighting of each security in the Portfolio will generally differ significantly from the allocation and weighting in the Fund's reference index.

Risks

The global investment risk of the Fund remains as described in the simplified prospectus or any amendments thereto and Fund Facts.

Results of Operations

For the twelve-month period ended December 31, 2023, the NBI U.S. High Conviction Equity Private Portfolio's Advisor-2 Series units returned 17.94% compared to 22.90% for the Fund's benchmark, the S&P 500 Index (CAD). Unlike the benchmark, the Fund's performance is calculated after fees and expenses. Please see the *Past Performance* section for the returns of all of the Fund's series, which may vary mainly because of fees and expenses.

Certain series of the Fund, as applicable, may make distributions at a rate determined by the manager. This rate may change from time to time. If the aggregate amount of distributions in such series exceeds the portion of net income and net realized capital gains allocated to such series, the excess will constitute a return of capital. The manager does not believe that the return of capital distributions made by such series of the Fund have a meaningful impact on the Fund's ability to implement its investment strategy or to fulfill its investment objective.

The Fund's net asset value rose by 6.19% over the period, from \$2.896 billion as at December 31, 2022 to \$3.075 billion as at December 31, 2023.

The new year got off to a roaring start on rising hopes for a soft landing for developed economies as inflationary pressures showed continued signs of abating, while China's reopening also fueled investor optimism at the beginning of the year. A wave of risk aversion then swept up the financial markets in February as hopes for an imminent end to rate hikes and a dovish policy pivot were dashed in the wake of unrelenting signs of resilient growth, an overheated labor market, sticky inflation, and some hawkish central bank rhetoric. However, financial markets ended a tumultuous first quarter on an upbeat note amid growing speculation that policymakers may have to abandon their tightening plans in response to turmoil in the banking sector.

Markets were up to start the second quarter, with both stock and bond markets generating positive results in April. Investors welcomed the strong start to the corporate earnings season, where better-than-expected results helped to overshadow concerns stemming from persistent inflation, further rate hikes, and fears of an economic downturn. Sentiment deteriorated and financial markets relapsed in May on the back of a hawkish re-pricing of central bank policy expectations, a sluggish global growth landscape, and debt ceiling jitters in the United States. Markets fluctuated but extended their gains in June amid mounting speculation that central banks will relent on the fight against inflation and engineer a soft economic landing.

While recession fears had been building given the Fed's most aggressive tightening cycle in decades, a string of positive economic data surprises and signs of easing inflationary pressures provided a dose of optimism that policymakers may achieve a soft landing. Meanwhile, the cascade of second quarter corporate earnings results have been stronger-than-expected, which also bolstered investor risk appetite in July. Extreme optimism gave way to growing skepticism in August as investors contemplated the trajectory for monetary policy. Volatility resurfaced and most asset classes ended the month lower as the higher-for-longer interest rate narrative took hold following data that showed ongoing resilience in the US economy. Volatility continued and markets retreated again in September as the "higher-for-longer" interest rate narrative took hold following data that showed ongoing economic resilience in the United States that has translated into elevated and persistent inflation.

Financial markets kicked off the fourth quarter on a somber note. While unrelenting strength in the US economy underscored the case for restrictive monetary policy for an extended time, escalating geopolitical tensions in the Middle East added to the gloomy mood and saw both stock and bond markets retreat in tandem. November then proved to be a blockbuster month for markets, with investor wagers for a dovish monetary policy pivot sparking a profound market rally. Financial markets ended 2023 on a high note with the Federal Reserve providing its strongest signal yet that it has ended its tightening campaign in December and pointed towards a pivot towards easing in 2024.

The Fund's relative underperformance was mainly driven by stock selection in the Consumer Discretionary, Information Technology and Health Care sectors. Partially offsetting these negatives was security selection in the Financials and Materials sectors as well as a lack of exposure to the Energy and Utilities sectors.

Among the top contributors to performance over the period were Microsoft and Alphabet. Conversely, among the bottom detractors were AutoZone and Johnson & Johnson. The performance was further negatively impacted by not detaining many of the magnificent seven that outperformed over the year, namely Nvidia, Meta, Apple and Amazon.

Recent Developments

During the period, the portfolio manager added Kenvue Inc and trimmed positions in Alphabet and Microsoft while adding UnitedHealth, Autozone and FactSet Research Systems.

As he enters 2024, he remains underweight Information Technology, Energy, Utilities and Real Estate as he continues to find more attractive investment opportunities in other sectors, including Financials, Consumer Discretionary, and Materials.

The Fund's investment horizon is best measured in years, conceivably decades, not months or quarters. The focus continues to be on identifying what the portfolio manager believes to be high quality companies with sustainable competitive advantages, operating in industries with high barriers to entry, contributing to durable pricing power.

Effective on or about March 10, 2023, the Advisor Series of the Fund was renamed Advisor-2 Series, the Series F of the Fund was renamed Series F-2, the Series FH of the Fund was renamed Series FH-2 and the Series H of the Fund was renamed Series H-2.

Past Performance

The performance of each series of the Fund is presented below and calculated as at December 31 of each year. It assumes that all distributions made in the periods shown were reinvested in additional securities and does not take into account sales, redemption charges, distributions, or optional charges that would have reduced returns. Past performance of a series of a Fund does not necessarily indicate how it will perform in the future.

Annual Returns

The bar charts indicate the performance for each the Fund's series in existence greater than one year during the years shown, and illustrate how the performance has changed from year to year. - ⁽¹⁾ This information is derived from the Fund's Annual Audited Financial Statements. The net assets per unit presented in the financial statements might differ from the net asset value calculated for fund pricing purposes. The differences are explained in the notes to the financial statements.
- ⁽²⁾ Net assets and distributions are based on the actual number of units outstanding at the relevant time. The increase or decrease from operations is based on the average number of units outstanding over the accounting period.
- ⁽³⁾ Distributions were paid in cash or reinvested in additional units of the Fund, or both.
- ⁽⁴⁾ The net assets are calculated in accordance with IFRS.
- ⁽⁵⁾ This information is provided as at the last day of the accounting period shown.
- ⁽⁶⁾ Management expense ratio is based on total expenses including sales taxes for the accounting period indicated (excluding commission, other portfolio transaction costs and withholding taxes) and is expressed as an annualized percentage of daily average net value during the accounting period. The management expense ratio includes, if necessary, the management expenses from its underlying funds, as described in Article 15.2 of Regulation 81-106.
- ⁽⁷⁾ The trading expense ratio represents total commissions and other portfolio transaction costs expressed as an annualized percentage of daily average net asset value during the accounting period. The trading expense ratio includes, if necessary, the trading expenses from its underlying funds, as described in Article 15.2 of Regulation 81-106.
- ⁽⁸⁾ The Fund's portfolio turnover rate indicates how actively the Fund portfolio's manager manages its portfolio investments. A portfolio turnover rate of 100% is equivalent to the Fund buying and selling all of the securities in its portfolio once in the course of the accounting period. The higher a Fund's portfolio turnover rate in an accounting period, the greater the trading costs payable by the Fund in the accounting period, and the greater the chance of an investor receiving taxable capital gains in the accounting period. There is not necessarily a relationship between a high turnover rate and the performance of a Fund.
