*The performance data presented in this table is based solely on return forecasts. These forecasts are subject to change at any time based on market or other conditions and could cause actual results to differ materially from the ones presented in this table.

**Equivalent yield to maturity is a financial concept which consists of illustrating the yield of a solution generating interest income and capital gains in comparison to a solution generating interest income exclusively. It takes into account the tax rate on interest income and capital gains to calculate the net return to maturity. Calculation results may vary depending on various factors, such as, but not limited to, fees and expenses, tax rate, timing of transaction, market fluctuations and portfolio composition. The yield to maturity, for its part, simply corresponds to the yield of a bond that would be held by an investor until its maturity.
